

**CVV-Conference 28.06.2019**  
**CHANCES AND IMPLICATIONS OF DIGITALIZATION IN HEALTHCARE**  
**(IN FRANCE AND GERMANY)**

*“The advancement of digitization is the central prerequisite for the successful development of our healthcare system,”* according to the website of the German Ministry of Health. How far did Germany and France get in 2019? How do we as patients, caregivers, scientists and entrepreneurs experience the upheaval and the possibilities that digitalization and new technologies offer? How do roles and responsibilities for both patients and caregivers change and how do the stakeholders manage this transformation? And is everybody sufficiently aware of the ethical questions which come along when robots and algorithms replace human beings? And after all, will this improve health care for the individual?

With this year's conference, hosted by the Centre Virchow-Villermé for Public Health Paris-Berlin, we invite you to gain an insight into the developments of digitalization in different areas of the health care system in Germany and France and to discuss opportunities and implications of digitalization in healthcare on different levels. The conference will be moderated by Derrick Williams, journalist at Deutsche Welle.

09:15 - 10:00      Registration and Coffee

10:00 - 10:15      Welcome

**10:15 - 10:35**      **KEY-NOTE**
